<b>BDO Seidman</b>	8.79%	12.09%	273
<b>All Other</b>	15.40%	12.40%	2,413

**Inside AGR Methodology**

The AGR rating is based on a quantitative model which weights specific accounting and governance metrics derived from corporate reporting. The rating is obtained by filtering corporate data through a proprietary AGR metric engine, statistically designed to identify and measure the potential for catastrophic risk (including fraud) within a corporation's accounting and governance practices.
